

Internship Assessment Task

Candidate Balakrishna

Project Restaurant Inventory Management System

Objective

Develop a minimal MVP version of a Restaurant Inventory Management System to help restaurants track ingredients, stock quantities, and inventory updates efficiently. The system should allow restaurant owners / managers to monitor stock availability and avoid shortages of kitchen items.

Core Features

1. Authentication

- Admin Login — secure login for restaurant admin / manager

2. Inventory Management

Manage restaurant inventory items.

- Add Inventory Items
- Edit Inventory Items
- Delete Inventory Items
- View Inventory List
- Item Name
- Category
 - Vegetables
 - Dairy
 - Meat
 - Beverages
 - Spices
 - Others
- Quantity
- Unit
 - Kg
 - Liters
 - Packs
 - Units
- Minimum Stock Limit
- Supplier Name (optional)

3. Stock Tracking

Track inventory availability and updates.

- Increase Stock
- Reduce Stock

- Auto Update Quantity
- Low Stock Warning
- Out of Stock Indicator

4. Inventory History

Track all inventory changes.

- View Stock Update History
- Track Added / Reduced Quantities
- View Date & Time Logs

5. Dashboard

Dashboard should display an inventory overview.

- Total Inventory Items
- Low Stock Items
- Out of Stock Items
- Recently Updated Items

Submission Requirements

- GitHub Repository
- Live Deployed Link
- README Documentation
- Short Demo Video

Evaluation Criteria

- UI / UX
- Database Design
- API Structure
- Code Quality
- Scalability
- Speed of Execution

Bonus Features (Optional)

- Expiry Date Tracking
- Supplier Management
- CSV Export
- Barcode Scanner Support
- Daily Inventory Report

Submission Deadline Sunday — 12:00 PM
